PRINCIPLES

01 **Touch-first density**
44px min targets, 16px side gutters, single-column everywhere except the utilities grid.

02 **Layered depth**
Ambient aurora · glass tab bar · elevated FAB · bottom sheets. Light guides the eye up the z-axis.

03 **Real-time, always**
Live pulse badge, animated gauges, count-up metrics. The UI reflects the system breathing.

04 **Calm by default**
Semantic color only where it earns it — critical red, warning amber, teal accent. Neutrals carry the rest.
