THE PROBLEM

Society management is broken

Most RWAs still rely on spreadsheets, WhatsApp groups, and manual processes that let critical issues slip through.

Manual Ledgers & Missed Payments

Paper-based maintenance tracking leads to billing errors, delayed follow-ups, and cash flow gaps that compound over time.

Silent Infrastructure Failures

Water pump failures, power outages, and gas leaks go undetected until residents complain — costing thousands in repairs and trust.

Resident Frustration

No visibility into complaint status, no digital receipts, no self-service portal — leading to endless calls to the secretary's personal phone.

WHAT WE OFFER

Everything your society needs

Eight integrated modules working in harmony — so your team never needs another tool.

AI-Powered Alerts

Claude AI explains every anomaly in plain English and predicts failures before they happen.

Utility Monitoring

Real-time water, electricity, and gas tracking with letter-grade health scores and trend charts.

Resident Portal

Digital payments, complaint tracking, visitor management, and vehicle registry — all in one app.

Smart Broadcasts

One-tap announcements reach every resident instantly with delivery confirmation.

Waste Management

Scheduled pickups, driver tracking, and route optimization reduce missed collections by 80%.

Reports & Analytics

Auto-generated PDF reports, occupancy stats, financial summaries, and custom dashboards.

Multi-Role Access

Tailored dashboards for RWA admins, residents, security guards, and maintenance staff.

Visitor Security

Guard check-in, visitor pre-approval, and real-time entry logs keep your society secure.

HOW IT WORKS

Up and running in 3 steps

No lengthy onboarding. No IT department required. Most societies are live within a week.

1

Deploy

We set up your society's account, onboard residents, and configure your block structure in under a day.

2

Connect

Utility meters, payment gateways, and communication channels are wired together on our secure platform.

3

Automate

AI takes over routine monitoring, alerts, and reports — your team focuses on decisions, not data entry.

CLAUDE AI INTEGRATION

Your society's AI analyst, always on call

BlockSenseAI is powered by Anthropic's Claude — one of the world's most capable AI models. Instead of raw data, you get plain-English explanations, root-cause analysis, and proactive recommendations delivered instantly.

Anomaly Explanation

Claude reads every alert and explains what happened, why it matters, and what to do next.

Predictive Maintenance

Pattern recognition across utility trends flags equipment degradation weeks before failure.

Auto-Generated Reports

Monthly summaries written in clear language — ready to present to the general body.

AI Alert Analysis

Block B — Water Pump · Just now

⚠ HIGH SEVERITY

Unusual water pressure drop detected on Block B riser (−34% from baseline)

This pattern is consistent with a partial blockage in the 4-inch main riser or a failing pressure valve. Based on historical data from similar incidents, I estimate a full blockage within 48–72 hours if unaddressed. I recommend dispatching the plumber to inspect the valve on Level 3 as a priority.

Platform Uptime

"

Before BlockSenseAI, I was spending 3 hours every week on WhatsApp chasing maintenance updates and collecting manual payment confirmations. Now everything is automated — I check my dashboard once in the morning and the entire society runs itself. The AI alerts alone have saved us from two major pump failures this year.
